

# MAGNA International St. Thomas, Ontario

**avus 800**  
Natural Gas

## Fast Facts:

**Location:** St. Thomas, Ontario

**Generating Capacity:** 800 kW

**Configuration:** Container Module

**Additional Features:** Custom Paint

## About the Site:

The industrial conglomerate Formet Industries; a wholly owned Magna subsidiary, is a leading global automotive supplier, with a focus on delivering superior value through innovative processes and world class manufacturing.

## Application

The natural gas fueled CHP system provides clean electricity and thermal energy to Formet Industries with more than 90% combined efficiencies. The CHP is utilizing waste heat as part of their hydro-forming truck frame assembly process in St. Thomas, Ontario, Canada. The implementation of the 2G Energy, Inc. CHP system has allowed Magna Formet to turn-off their previous inefficient heating systems for this process. Additional features such as custom paint were utilized to allow the delivered system to blend into the current architecture of the existing building.
