

West End Community Center South Guelph, Ontario

patruus 400
Natural Gas

Fast Facts:

Location: South Guelph, ON, Canada

Generating Capacity: 400 kW

Heat Recovery: Thermal energy captured to heat building and water

Configuration: Container Module

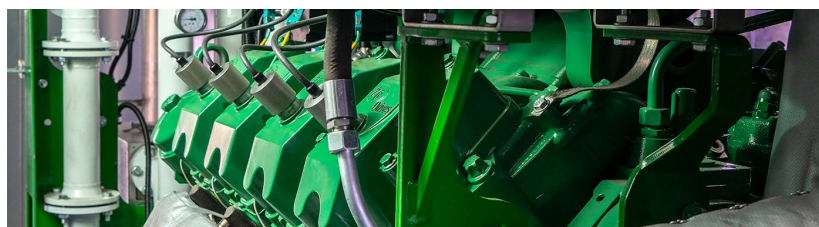

About the Site:

The West End Community Centre (WECC) is a modern, fully accessible, multi-purpose community center that has a full range of facilities from a large public swimming pool, an NHL sized twin-pad arena, a large gymnasium, community meeting rooms, cafeteria and a library that complements the facility.

Application

This 2G CHP system provides power and heating to the community center, significantly improving the building's energy efficiency, and helping to reduce Ontario's greenhouse gas emissions. The CHP system will further provide standby power to the community center.
